MUSAAZI ALIYER BAKERS

Software Developer · Python & Django · AI Integration

+256 790 338 951 | aliahbakers46@gmail.com | GitHub | LinkedIn | Portfolio | Kampala, Uganda

PROFESSIONAL SUMMARY

Software developer and AI engineer who builds practical web apps with Python and Django and adds AI where it helps. Certified in software engineering by Refactory Academy and currently a Python Development Intern at Auspify Technologies, with a deployed capstone project and 74 automated tests across my work. Looking for a software and AI engineering internship.

EDUCATION & CERTIFICATIONS

Qualification	Institution	Year
Software and AI Engineering	Turing College	In progress
IoT and Embedded Systems	Spiro Academy Uganda	In progress
Certificate in Software Engineering (240 hours)	Refactory Academy	2026
Hedera Certified Foundation (HCF)	The Hashgraph Association	2026
Hedera Business Foundation	The Hashgraph Association	2026
Uganda Certificate of Education (UCE)	Jericho High School	2024

TECHNICAL SKILLS

Backend & data: Python, Django, object-oriented programming, SQLite, PostgreSQL
Frontend: HTML5, CSS3, JavaScript, React, Bootstrap, Streamlit, Tkinter
AI: OpenAI and OpenRouter APIs, RAG, LangChain, MCP, prompt engineering, Structured Outputs, prompt-injection and jailbreak defence
UI/UX: User research, Figma
Tools & practice: Git, GitHub, GitLab, pytest, unittest, Django tests, deployment on Render, code review, Agile
Learning: IoT and embedded systems, Arduino, TypeScript

INTERPERSONAL SKILLS & LANGUAGES

Effective communication · Teamwork and collaboration · User research · Pitching and presenting · Creativity and problem-solving · Emotional intelligence · Flexibility and multitasking · Learning from feedback
Languages: English (fluent) · Luganda (fluent) · Swahili (elementary)

EXPERIENCE

Python Development Intern *Oct 2026 – Present*
Auspify Technologies (Remote)

- **Python projects:** Building a password generator, a to-do list, a calculator with a GUI and an expense tracker, organised one task per folder in a GitHub repository.

Founder & Lead Developer *2026*
Absa Girl Code Hackathon (MwanaCare, child vaccination tracker)

- **Product & build:** Came up with the idea and built the full Django app: clinic records, parent accounts and each child's vaccination schedule; teammates helped shape the idea and the pitch.
- **After the hackathon:** Added a stamped digital vaccination card, a clinic map with directions, phone-number login and 22 automated tests.

Team Member: Idea, Design & Pitch *2026*
Africa's Talking Women in Tech Hackathon (PlayConnect)

- **Product design & pitch:** Shaped the idea, design and pitch for a sports platform linking athletes, fans, scouts and clubs over web, SMS and USSD.

PORTFOLIO PROJECTS

Nyondo General Hardware, Stock & Sales System *2026*
Refactory Academy capstone, solo · Django, Gunicorn, Render · Live demo

- **User research:** Surveyed a hardware store's staff, then built a stock, sales and customer system around what they needed.
- **Features:** Inventory, sales and receipts, deposits, supplier payments and reports, with role-based permissions for admins, stock and sales managers.
- **Deployment:** Deployed on Render with production security settings and an automatic demo account.

Interview Room, AI Interview Coach *2026*
Solo · Python, Streamlit, OpenRouter, pytest

- Built an AI coach that runs mock interviews and scores answers with the STAR method; compared 5 prompt techniques on tokens and speed and added four layers of prompt-injection defence.

Learning Companion, AI Study Tool *2026*
Solo · Python, OpenAI, Pydantic, Rich

- Built a terminal study tool that writes quizzes, grades answers and repeats weak topics; replaced hand-written JSON parsing with Structured Outputs and covered failures with 40 tests.
